Subnet groups
Parameter groups
Option groups
Custom engine versions
Zero-ETL integrations [New](#)

You can use settings from database-1 to simplify configuration of suggested database add-ons while we finish creating your DB for you.

Introducing Aurora I/O-Optimized
Aurora's I/O-Optimized is a new cluster storage configuration that offers predictable pricing for all applications and improved price-performance, with up to 40% costs savings for I/O-intensive applications.

Consider creating a Blue/Green Deployment to minimize downtime during upgrades
You may want to consider using Amazon RDS Blue/Green Deployments and minimize your downtime during upgrades. A Blue/Green Deployment provides a staging environment for changes to production databases. [RDS User Guide](#) [Aurora User Guide](#)

Databases (1) ☒ Group resources

Filter by databases

| <input type="checkbox"/> | DB identifier | Status | Role | Engine | Region & AZ | Size | Recom |
|-------------------------------------|---------------|-----------|----------|-----------------|-------------|-------------|-------|
| <input checked="" type="checkbox"/> | database-1 | Available | Instance | MySQL Community | us-east-1b | db.t3.micro | |
